

FBI and Homeland Security officials are actively encouraging business owners and government officials to go on the offense by adding video surveillance as a first line of defense against potential terrorist activities. Digitech video surveillance equipment has been used reliably for years to monitor and record tenant/employee activity and record property vandalism incidents. The Digitech line of digital video recorders and cameras are cost effective, easy to install and supported by Digitech technicians after the sale.

DigiView™ Digital Video Recorders

3-year warranty provides years of peace of mind:

Images are archived on a 120-gig drive and the operating system utilizes a separate 40-gig drive. By isolating the drive functions, the DigiView can operate for several years without the hard drive failure common with many competitive units.

Record more data, enjoy enhanced resolution. Many digital video recorders record images at 20 to 25k file sizes. DigiView records at a 5k file size and generates a 640 by 480 image resolution. This advanced recording technology allows crisp images to be archived for several weeks without the need of large hard drives.

Multiple viewing and archiving options: The unit comes standard with a DVD/CD writer to allow quick offloading of incidents. A removable hard drive is also included for those choosing to store camera activity for several months. Other operator options include: emailing files, printing and transferring images to a server.

View remotely via the internet: Simply plug in the password and ID into the Web DVR browser and instantly view the current activity on all cameras. The installation of remote viewing software allows both viewing and retrieval of archived camera images.

Digitech 4-channel DVR:

This cost effective, VCR-style recorder utilizes a handheld remote and comes standard with many of the above operational and remote viewing features.

Video Surveillance Systems

Choose from a variety of camera and mount options including: mini-domes, fixed mount interior/exterior, day/night, pan-tilt-zoom and network cameras.

Fixed Mount DigiView Plus™ Cameras:

Choose from standard “L” or “J” bracket mount to affix your cameras to the ideal location. The DigiView Plus™ cameras feature feed-through mounting brackets to conceal cabling and reduce installation time. Select from either a mid or short range varifocal lens with auto-iris to generate a crisp image.

Slide off cover allows for ease of installation and service.

Keypad/Pinhole and Dome Cameras:

For those desiring more elusive surveillance, Digitech offers pinhole cameras that can appear in keypads and exit signs as well as interior and exterior dome cameras to compliment the décor the environment.

DigiView Plus™ Day / Night Cameras:

Utilize the latest SDII camera technology to capture highly viewable color and/or black and white images under extreme lighting conditions. View crisp color images in variable low-light settings and then select the light level that will convert the camera image to a very detailed black and white image. The camera settings can be pre-programmed or converted manually to optimize your image.

Network Cameras and Video Server:

Any remote site with power and a broadband connection can now have up to 16 channels of video archived at frame rates of up to 30 frames per second. Eight people can simultaneously view as many as four cameras through this server-based system.
